

SECTOR SOLUTIONS

TAILORED ACCESS SOLUTIONS FOR EVERY SECTOR

SECTOR

Warehousing & Racking

Providing safe & reliable working at height solutions for **warehouse fit-outs & racking installation** projects

WAREHOUSE FIT-OUT & RACKING CHALLENGES

High-bay racking, tight aisles, and safety-critical installation work all put pressure on the access equipment you choose

01

Narrow aisles

Racking layouts leave little room to manoeuvre. Compact narrow-aisle machines are needed.

02

Increasing bay heights

New high-bay warehouses can push heights well beyond 30m, potentially limiting access choice.

03

Multi-person tasks

Racking install teams need to work together with materials at height, without being limited by machine capacities.

04

Safety & site regulations

Reliable platforms are essential when working above stock and structure. Features such as non-marking tyres may also be mandated.

05

Environmental considerations

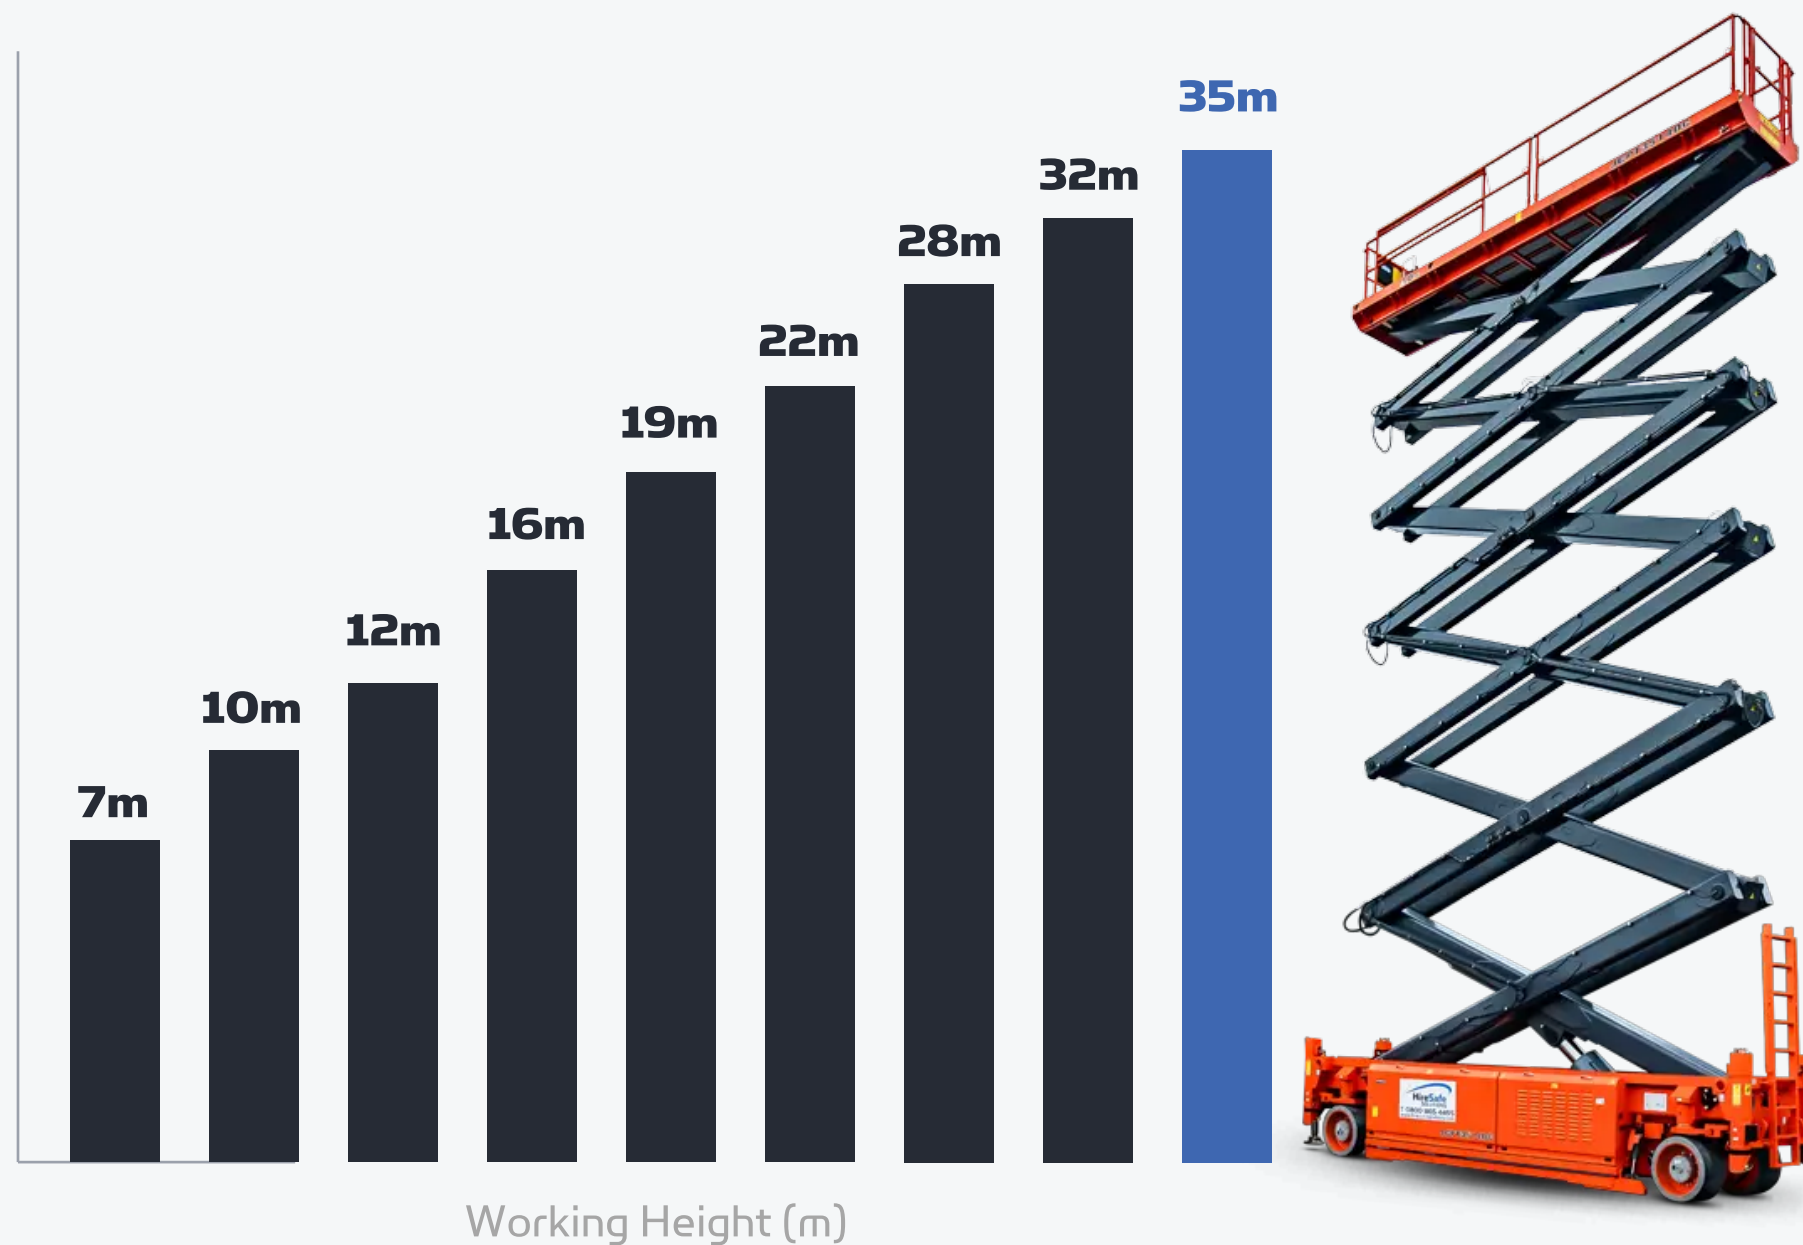

Working indoors requires clean, emission-free equipment.

In Short

Having access to a wide choice of equipment without having to compromise on performance is essential.

OUR NARROW-AISLE ELECTRIC SCISSOR RANGE

Industry-leading working heights up to 35m - built for racking and high-bay warehouse work

Dingli 3514DC – 35m Narrow-Aisle Scissor

Home to the **world's tallest electric scissor lift** and one of the **only suppliers in the country** to offer this 35m electric machine.

- ✓ Traditionally this height would require a boom lift – lower capacity and harder to position in tight bays
- ✓ Narrow 1.4m width fits easily between racking aisles most booms can't access
- ✓ Far higher platform capacity vs equivalent boom – able to lift multiple workers and materials at once
- ✓ Large platform area – covers greater working area and doesn't have to be repositioned as frequently

WHY SCISSOR LIFTS EXCEL FOR RACKING

Our narrow-aisle scissor lifts provide flexibility when working at heights where a boom lift would traditionally be required

	Narrow-Aisle Scissor	Boom Lift
Platform Capacity	Up to 750kg – room for more people and materials	Considerably lower – typically 1-2 people with limited load
Manoeuvring in aisles	Ultra-narrow widths from 0.8m to 1.4m	Wider footprint, harder to position exactly where needed
Team working	Large platform size/extension deck for multiple workers	Smaller basket and limited movement due to safety harness anchor
Repositioning	Fewer raise/lower cycles needed	Frequent repositioning to reach required areas

35m ELECTRIC SCISSOR LIFT

OUR WIDER RANGE OF SOLUTIONS

When scissor lifts aren't an option – we offer a range of other equipment tailored to the warehouse & racking sectors

Electric Mast Booms

Compact, easy to position with tight turning circles for lighter racking and maintenance tasks in confined spaces

Electric Articulated & Telescopic Booms

Larger working heights with up-and-over or straight-out reach allowing access around structures and obstructions

Hybrid Articulated & Telescopic Booms

Extended run times and useful when access to charging facilities on site is limited

NATIONAL COVERAGE

Strategically located depots and holding yards across the UK & Ireland for improved availability

Our in-house transport allows us to offer true national coverage

- Fast response times, reduced transport costs, and maximised fleet availability
- Reliable delivery to city centres, remote sites, and multi-location projects
- Infrastructure and expertise to provide the right equipment exactly when and where it's needed
- National reach backed by a dedicated support team to keep projects moving

BUILT FOR ENCLOSED SPACES

- Electric and hybrid MEWPs produce little to no emissions – ideal for working inside unfinished and occupied warehouse spaces
- No exhaust fumes or noise disruption to ongoing warehouse operations during fit-out
- Supports site environmental policies and contractor sustainability commitments
- Non-marking tyres protect finished flooring throughout the project. For added protection, wheel covers can be fitted to all equipment

**Over 65% of our
fleet is electric &
hybrid**

TOOLBOX TALK OFFERING

We offer toolbox talks and masterclasses to your operatives as part of our ongoing commitment to safety

- ✓ **MEWP Familiarisations**
- ✓ **Emergency Lowering Training**
- ✓ **Pre-Use Inspections**
- ✓ **Safety Innovations Overview**
Intelligent anchor point / secondary guarding / telematics

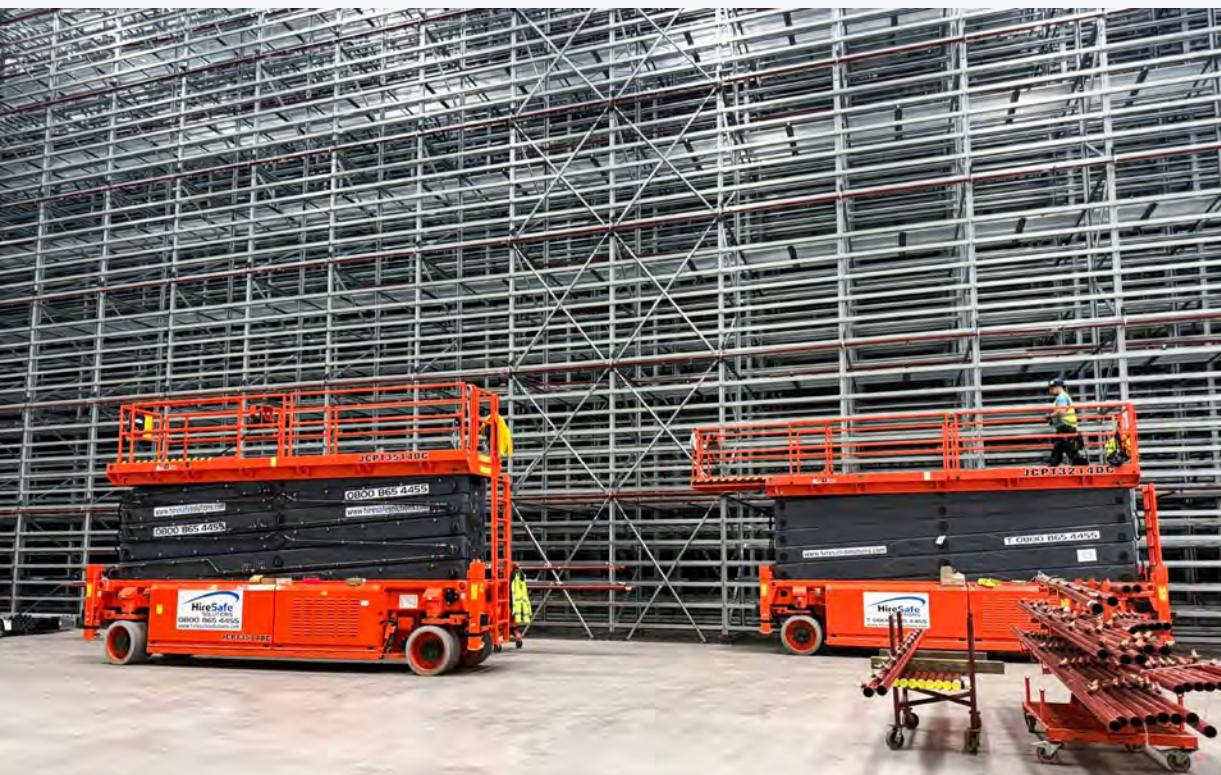

PAST PROJECTS

A selection of warehouse fit-out and racking installations we've supported

Racking installation

- 22m up to 32m narrow-aisle and wide-deck electric scissors supplied
- Multiple 35 narrow-aisle electric scissors
- Rotating telehandlers equipped with various lifting attachments and fitted with electric power converters for 100% emission-free use indoors

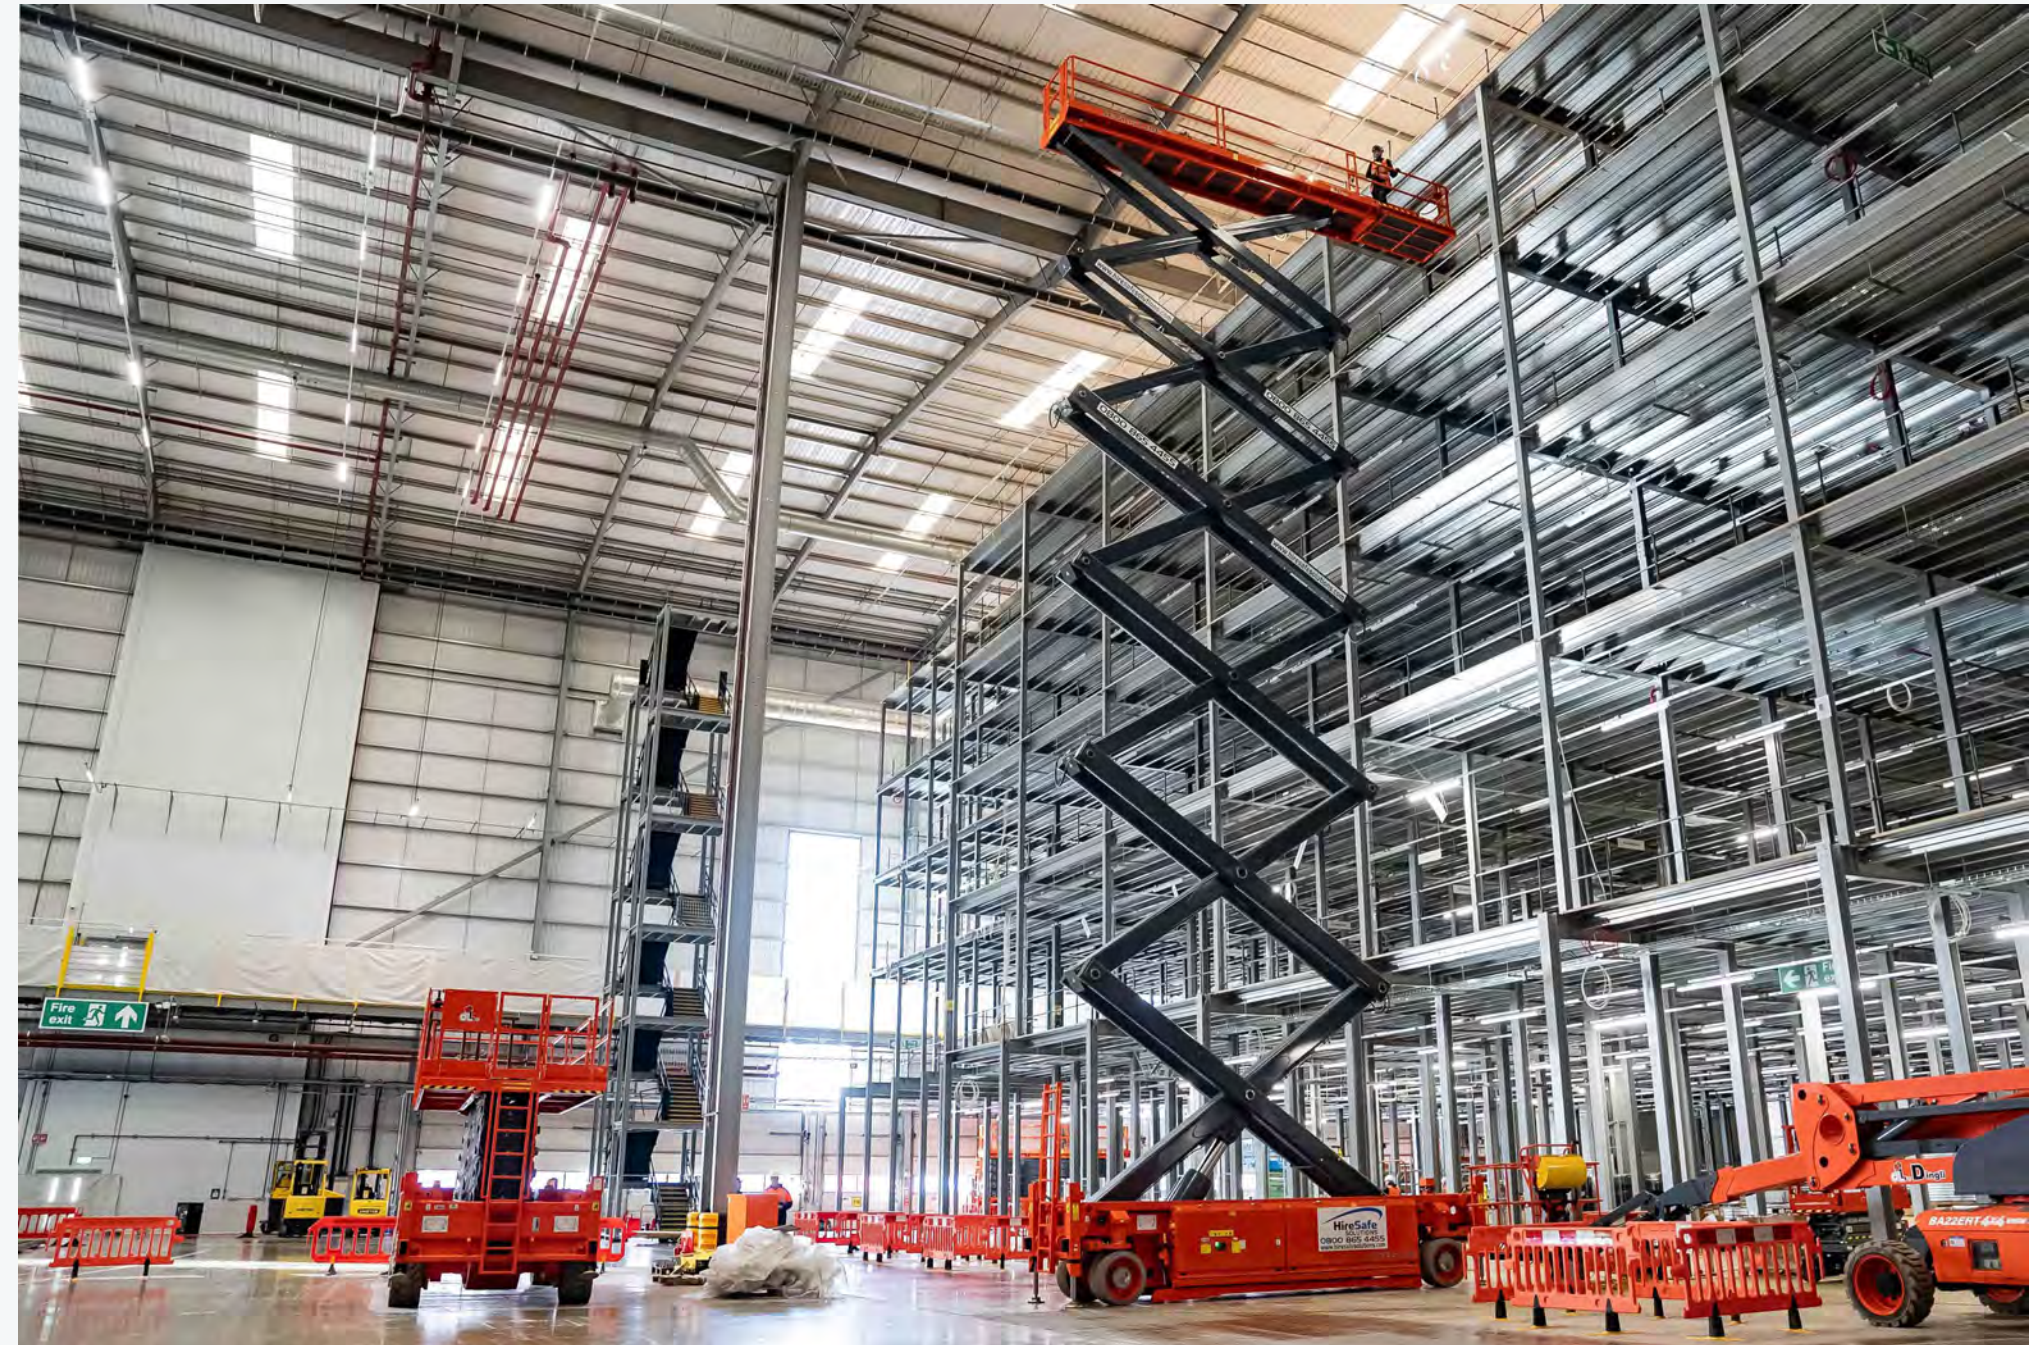

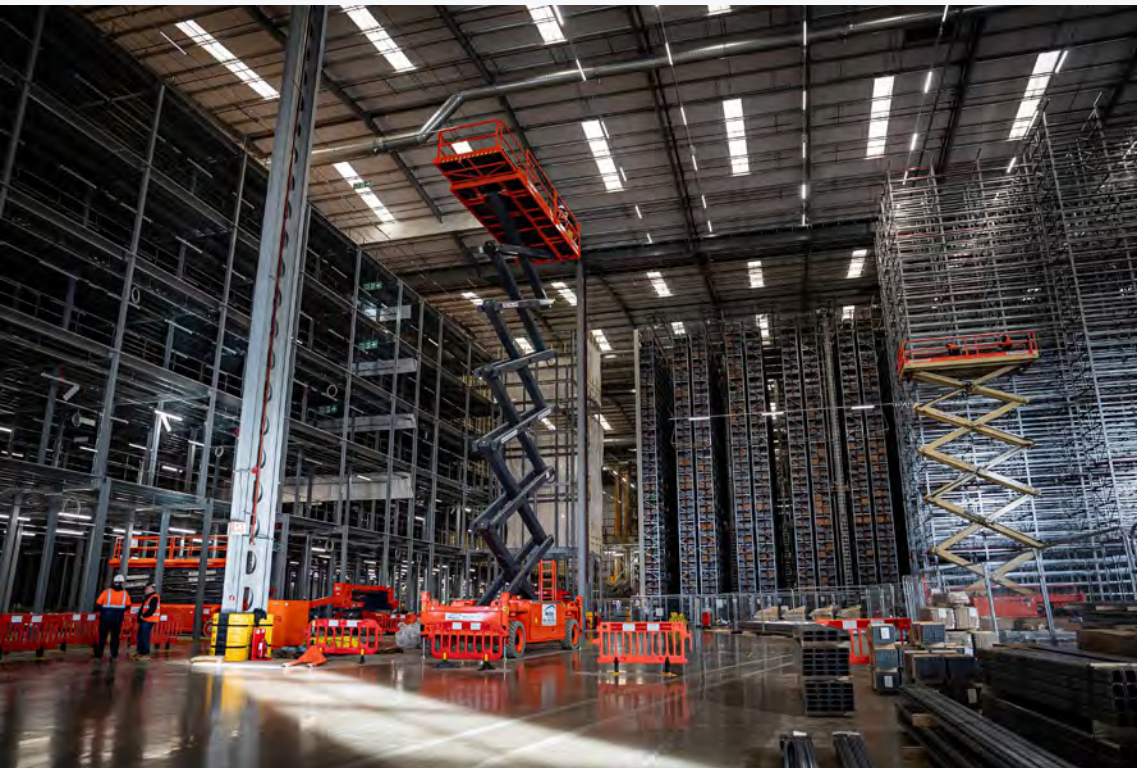

PAST PROJECTS

A selection of warehouse fit-out and racking installations we've supported

M&S Distribution Centre

- A selection of narrow and wide-deck electric scissor lifts from 22m up to 35m
- Our Dingli 3514DC was used to access areas between racking that was otherwise impossible to reach

PAST PROJECTS

A selection of warehouse fit-out and racking installations we've supported

High-bay warehouse fit-outs

- A combination of rotating telehandlers, articulated booms and telescopic booms supplied due to the working heights required
- All diesel equipment fitted with Chalwyn valves, spark arrestors and wheel covers to reduce impact on surrounding area

ONE OF THE UK'S MOST CAPABLE FLEETS

A comprehensive range — plus machines few UK providers can offer

STANDARD FLEET

- Narrow-aisle scissor lifts
- Electric & Hybrid power
- Emission-free Boom lifts
- Rotating telehandlers
- Non-marking tyres
- Narrow widths

SPECIALIST HIGH-REACH

37m

Dingli 3730HRT

Hybrid wide-deck scissor lift

35m

Dingli 3514DC

Electric narrow-deck scissor lift

Specialist machines unavailable from most UK rental providers

SUPPORT

READY TO SUPPORT YOUR NEXT PROJECT?

Let's keep your next project moving

Whether it's a high-bay warehouse fit-outs or racking installations, we provide fully bespoke powered access solutions backed by one of the UK's most capable high-reach fleets.
